Probability is the measure of the likelihood that an event will occur. See glossary of probability and statistics. Probability quantifies as a number between 0 and 1, where, loosely speaking, 0 indicates impossibility and 1 indicates certainty. The higher the probability of an event, the more likely it is that the event will occur.

Conditioning on an event Kolmogorov definition. Given two events A and B, from the sigma-field of a probability space, with the unconditional probability of B (that is, of the event B occurring) being greater than zero, $P(B) > 0$, the conditional probability of A given B is defined as the quotient of the probability of the joint of events A and B, and the probability of B:

Conditional probability - Wikipedia

Phrase structure grammar is a type of generative grammar in which constituent structures are represented by phrase structure rules or rewrite rules. Some of the different versions of phrase structure grammar (including head-driven phrase structure grammar) are considered in examples and observations below.

Phrase Structure Grammar—Definition and Explanation

Under the algebra area, there is a lot of overlapping between the different levels (beginning, intermediate, and college) of tutorials. Find the algebra level that agrees with you most and do all of the tutorials under that level. If you start below college level algebra, make sure that you make your way up through college algebra before you take the GRE general test.
