

## *Replacement Of Renal Function By Dialysis*

### **Replacement Of Renal Function By**

Renal replacement therapy (RRT) is therapy that replaces the normal blood-filtering function of the kidneys. It is used when the kidneys are not working well, which is called renal failure and includes acute kidney injury and chronic kidney disease. Renal replacement therapy includes dialysis (hemodialysis or peritoneal dialysis), hemofiltration, and hemodiafiltration, which are various ways of ...

Acute kidney injury (AKI), previously called acute renal failure (ARF), is an abrupt loss of kidney function that develops within 7 days. Its causes are numerous. Generally it occurs because of damage to the kidney tissue caused by decreased kidney blood flow (kidney ischemia) from any cause (e.g., low blood pressure), exposure to substances harmful to the kidney, an inflammatory process in ...

### **Acute kidney injury - Wikipedia**

Renal replacement therapy has a vital role in the treatment of severe acute kidney injury (AKI) and end-stage kidney disease. Most patients with chronic kidney disease (CKD) stage 4-5 (estimated glomerular filtration rate (eGFR) <30 ml/minute/1.73 m<sup>2</sup>) or with CKD stage 3 and rapidly deteriorating renal function should be referred for assessment by a nephrologist.
